TERRAAERO

TerraAero

Precision Drone Application Infrastructure for the Southern U.S.

TerraAero is a full-stack aerial application platform that replaces outdated tractor and aviation spraying with fast, precise, AI-driven drone operations. We deliver: **Higher yield**, **Lower cost per acre**, **USDA/EPA-compliant documentation**, **Regional operational density**, and **A scalable network of trained operator crews**.

TerraAero is building the new agricultural spraying infrastructure for 23 southern U.S. states.

The Problem & Solution

The Problem

Traditional spraying is:

- slow, expensive, and weather-limited,
- damaging to crops (3–6% yield loss),
- imprecise and wasteful with chemicals,
- non-compliant with USDA/EPA documentation rules,
- limited by a shortage of trained operators.

Farmers lose tens of thousands of dollars per season due to poor-quality application.

The Solution

A fully integrated platform combining:

1. **AI Stack** — Document AI (automated USDA/EPA/FAA-compliant reports), Route AI (optimized flight paths, timing, chemical efficiency), Fleet OS (multi-crew operational management)
2. **In-House Drone Manufacturing** — Cost per drone: ~$7K (vs. $25–56K market), Crew setup: 2 working + 1 scouting drone
3. **TerraAero Academy** — 150–200 operators trained per year, FAA Part 107 certification, Agronomy + safety curriculum
4. **Regional Operations Network** — High-density crew placement, Fast response times, Multi-state scalability

---

Why Now

- USDA/EPA tightening documentation requirements
- Rising costs of tractor and aviation spraying
- AI breakthroughs enabling real-time optimization
- Generational shift: younger, tech-driven farmers
- Market gap: no scalable drone-based infrastructure in the U.S.

Unit Economics & Financial Outlook

40–45K
acres/year
Per Crew

$720–810K
revenue
Per Crew

36%
net margin

$300–360K
net profit
Per Crew

900–1,100%
ROI per crew

This is one of the strongest ROIs in agricultural services.

Financial Outlook

Year 1 — 4 crews
Revenue: ~$1.6M
Profit: ~$480–520K

Year 2 — 12 crews
Revenue: ~$7.8M
Profit: $2.3–2.6M

Year 3 — 25–27 crews
Revenue: $21–22M
Profit: $7.5–8.0M

Investment & Valuation

Phase 1 Round: $700K

Launch 4-crew operations, Academy, AI stack, Fleet OS, field center.

Phase 2 Growth Capital: up to $4M

Scale to 25–27 crews across southern states.

Valuation by Year 3:

$80–120M

Investor ROI (Seed Round):

9× – 12×

Exit Strategy

- Strategic acquisition (John Deere, Bayer, Corteva, Nutrien, Trimble, Raven)
- Private equity roll-up
- Long-term IPO path

TerraAero's AI + fleet infrastructure compresses 5+ years of R&D, making it a high-value strategic asset.

Why TerraAero Wins

- AI stack competitors cannot replicate
- In-house manufacturing lowers CAPEX 3–7×
- Academy solves national operator shortage
- Full USDA/EPA compliance — rare in the market
- Operational density across southern states
- Superior economics and speed vs. tractors & aviation
